

**Gender Mainstreaming in Climate Change Adaptation: A case of Bungoma County of
Western Kenya**

Ekisa George, Chikamai Lucy., Juma Shem.

Abstract

This research examines climate change Adaptation activities over Bungoma County. Gender involvement in activities geared towards enhancing resilience to climate risks is investigated. Systematic sampling of cross sectional data representing 100 households was done over the area of study. Preliminary results of the analysis indicate a gender biased strategy to enhance climate change adaptation. It is expected that at the end of this research, gender gaps in climate change adaptation activities will be identified and addressed over the area of study.
