

(Knowledge for Development)

KIBABII UNIVERSITY COLLEGE

**A CONSTITUENT COLLEGE OF MASINDE MULIRO UNIVERSITY OF
SCIENCE AND TECHNOLOGY**

UNIVERSITY EXAMINATIONS

2014/2015 ACADEMIC YEAR

SECOND YEAR SECOND SEMESTER

MAIN EXAMINATION

FOR THE DEGREE OF BACHELOR OF SCIENCE

AND BACHELOR OF EDUCATION

COURSE CODE: STA 242

COURSE TITLE: PROBABILITY AND DISTRIBUTION MODELS

DATE: 28/4/15

TIME: 8.00AM -10.00PM

INSTRUCTIONS TO CANDIDATES

Answer Question One in and Any other TWO Questions

TIME: 2 Hours

This Paper Consists of 4 Printed Pages. Please Turn Over.

QUESTION ONE (30MARKS)

- a) Let X and Y be two discrete random variables with a joint probability function f(x, y).

Define

- i. Marginal probability function of X
- ii. Marginal probability function of Y (2marks)

- b) The distance between flaws on a long cable is exponentially distributed with mean 2m

- i. Find the probability that the distance between two flaws is greater than 15m (3marks)
- ii. Find the probability that the distance between two flaws is between 8 and 20 (4marks)

- c) Given the joint density of two continuous random variables X and Y as shown below. Find the marginal and conditional p.d.f of X and Y (8marks)

$$f(x, y) = \begin{cases} \frac{1}{4}(1+x) & |x| < 1, |y| < 1 \\ 0 & \text{otherwise} \end{cases}$$

- d) Consider an experiment of tossing the tetra-hedra (regular four sided polyhedron) each with sides labelled 1-4. Let X be the score on the 1st tetrahedron and X₁ be the score on the 2nd tetrahedron.

Let Y denote the maximum of X and X₁. Find the joint C.D.F of

- i. F(1, 2) (2marks)
- ii. F(4,3) (2marks)

- e) Let X and Y have a bivariate density

$$f(x, y) = \begin{cases} e^{-(x+y)} & x > 0, y > 0 \\ 0 & \text{otherwise} \end{cases}$$

Show that f(x, y) is a p.d.f (3marks)

- f) Let X and Y be jointly distributed random variables with joint p.d.f as shown below. Obtain

$$f(x, y) = \begin{cases} p^{(x+y)}(1-p)^{2-x-y} & x = 0,1, y = 0,1 \\ 0 & \text{otherwise} \end{cases}$$

- i. E(X)
- ii. E(X+Y)
- iii. E(x-Y) (6marks)

QUESTION TWO (20MARKS)

The joint probability function of two discrete random variables X and Y is given by $f(x, y) = c(2x + y)$, where x and y assume all integers such that $0 \leq x \leq 2$, $0 \leq y \leq 3$, and $f(x, y) = 0$ otherwise. The sample points (x, y) for which probabilities are different from zero are indicated in the table below. The probabilities associated with these points, given by $c(2x + y)$, are shown in **Table below**.

$X \backslash Y$	0	1	2	3	Totals ↓
0	0	c	$2c$	$3c$	$6c$
1	$2c$	$3c$	$4c$	$5c$	$14c$
2	$4c$	$5c$	$6c$	$7c$	$22c$
Totals →	$6c$	$9c$	$12c$	$15c$	$42c$

- a) Find the value of the constant c .(2marks)
- b) Find $P(X = 2, Y = 1)$.(1marks)
- c) Find $P(X \geq 1, Y \leq 2)$.(1marks)
- d) Find the marginal probability function of X and Y .(4marks)
- e) Show that the random variables X and Y are independent.(3marks)
- f) Evaluate $E(X)$, $E(Y)$, $E(X, Y)$, $E(X^2)$, $E(Y^2)$, $Var(X)$, $Var(Y)$ and $Cov(X, Y)$ (9marks)

QUESTION THREE (20MARKS)

- a) Given the joint density of X_1 and X_2 as

$$f(x, y) = \begin{cases} 1 & 0 < x_1 < 1 \quad 0 < x_2 < 1 \\ 0 & \text{otherwise} \end{cases}$$

Find

- i. The joint density of $Y = X_1 + X_2$ and $Z = X_2$ (4marks)
 - ii. The marginal density of Y (3marks)
- b) Show that the variance of the Exponential distribution is $1/\lambda^2$ (13marks)

QUESTION FOUR (20MARKS)

- a) The joint probability density function of the thickness X and hole diameter Y (bolt in mm) of a randomly chosen washer is

$$f(x, y) = \begin{cases} \frac{1}{6}(x + y) & 1 \leq x \leq 2, 4 \leq y \leq 5 \\ 0 & \text{otherwise} \end{cases}$$

- i. Find the conditional probability density of Y given $X = 1.2$ (7marks)
- ii. Find the probability that the hole diameter is less than or equal to 4.8 given that the thickness is 1.2mm (2marks)
- iii. Find the conditional expectation of y given that $X = 1.2$ (2marks)
- iv. Find the value of $E[Y]$?. Does it differ from $E[Y/X = 1.2]$ (3marks)

- b) Suppose that X and Y are the two discrete random variables with the joint p.d.f given by

$$f(x, y) = \frac{1}{54}(x + y) \quad x = 1, 2, 3 \text{ and } y = 1, 2, 3, 4$$

Determine the conditional distribution for Y given that $X = x$, hence calculate

- i. $P(y=1/x=1)$
- ii. $P(Y=4/X=3)$ (6marks)

QUESTION FIVE (20MARKS)

- a) Suppose that Y_1 and Y_2 are random variables (discrete or continuous). Show that $V(Y_1 + Y_2) = V(Y_1) + V(Y_2) + 2\text{Cov}(Y_1, Y_2)$ (4marks)
- b) A small health-food store stocks two different brands of grain. Let X denote the amount of brand 1 in stock and let Y denote the amount of brand 2 in stock (both X and Y are measured in 100s of lbs). The joint distribution of X and Y is

$$f_{x,y}(x, y) = \begin{cases} 24xy & x > 0, y > 0, 0 < x + y < 1 \\ 0 & \text{otherwise} \end{cases}$$

- i. Find the conditional pdf $f_{x/y}(x/y)$. (5marks)
- ii. Compute $P(X > 0.5/Y = 0.3)$. (4marks)
- iii. What is the variance for the total amount of grain in stock? (7marks)
